

# For rugged, two-way communication, consider the bar officially raised.

## XP5plus to XP5s comparison

The Sonim XP5plus is an ultra-rugged communication device that offers the best of both cellular and radio-like capabilities for those who work in extreme conditions.

Improving upon the legacy of its predecessor, the Sonim XP5s, at the top of its long list of new features is a version with two easy-to-use control knobs—for channel select and volume control. Push-to-Talk can now be accessed without users ever taking their eyes off the mission in front of them. Of course, the improvements don't stop there. With longer battery life and a larger screen, the XP5plus raises the bar on what a two-way can do. Third-party tested and validated to MIL-STD-810H, the highest Military rating available, so you know it thrives even in the most punishing of conditions. Sonim Rugged. It's the only way to two-way.
